

Natural Gas Safety: Be A Responsible Citizen

In our community, **Hardeman Fayette Utility District** provides natural gas to more than 5,000 customers through a network of underground distribution lines.

Main gas lines branch into household service lines. The main lines are typically 2 – 10 inches in diameter and are located roughly 2 feet below the surface, while service lines are typically half-inch to three-quarter-inch in diameter and buried 12 to 18 inches below the surface.

That's why it's important to "**CALL BEFORE YOU DIG**" or move earth in any way.

Whether you're installing an underground dog fence, running water to an outbuilding or post-hole digging for a new mail box post, underground piping and other utilities can be damaged.

When you call the **TENNESSEE ONE-CALL CENTER at 811**, they will locate all buried utility lines on your property, so you can safely dig and prevent a potentially hazardous condition.

Calling before you dig can prevent a costly or even deadly mistake.

Natural gas is a colorless, odorless gas; however, a chemical that smells like rotten eggs is added to help detect a possible leak.

If you smell gas, or just think you might be smelling gas:

LEAVE the area immediately

CALL your local gas provider at 901-877-6236 / 1-800-335-4383 or 9-1-1 from a neighboring home or business

NEVER turn on or off switches or use a flashlight or phone in the presence of the gas smell, because an electric spark could ignite the gas, causing an explosion.

CALL BEFORE YOU DIG

811
